# Tech Akhil SEO Audit Tool

User Guide · Version 1.9.14

---

Installation · Shortcode · Audit reports · Settings · Google Search Console · Privacy

Official documentation: https://techakhil.com/free-seo-audit-tool/

Support: WordPress.org support forum

## 1. Installation and shortcode

- Back up your site and test on staging when possible.
- In WordPress Admin, go to Plugins → Add New Plugin → Upload Plugin; select the ZIP, install it, and activate it.
- Open the SEO Audit menu for administrator tools, settings, optional Google Search Console integration, and Audit Activity.
- Edit a page, add a Shortcode block, paste the exact shortcode below, then preview or publish.

```
[seo_audit_checklist_tool]
```

Use a Shortcode block or a page-builder widget that executes WordPress shortcodes. Do not paste it into an ordinary paragraph as plain text.

## 2. Run an audit

- Enter a URL starting with http:// or https://.
- Optionally enter a focus keyword and up to ten related keywords.
- Complete the required acknowledgement shown by the public form, submit, and wait for results.
- Review Critical findings first, then Warning and Notice items. Follow the prioritized action plan.
- Use Print / Save as PDF to keep a copy.

Only audit websites you own or are authorized to assess. The WordPress server requests the submitted URL and selected same-host pages.

## 3. Features and report interpretation

- Checks selected title/meta description, headings, canonical/noindex, image alt, links, robots.txt, sitemap, viewport/language, structured-data presence, mixed content, selected response headers and content heuristics.
- Crawl is bounded (up to 30 pages subject to time budget) and does not execute JavaScript.
- Critical, Warning and Notice are diagnostic priority categories; some checks are heuristic.
- Focus Keyword Analyzer is an internal checklist indicator, not a Google ranking score. This plugin does not provide search volume, keyword difficulty, backlinks, or guaranteed rankings.

## 4. Settings and optional features

- Report appearance: configure supported theme/accent options.
- Public attribution is optional and disabled by default.
- Audit Activity is optional and stores normalized domain and date/time only when the submitter opts in.
- Google Search Console integration is optional and requires administrator configuration and Google authorization.

## 5. Google Search Console

- Only an administrator should configure OAuth credentials and start the connection.
- Follow the settings screen and Google authorization prompt; grant only requested read-only Search Console access.
- If connection fails, check OAuth client settings, redirect URI, property permissions, outbound connectivity, and WordPress/PHP logs.
- Disconnect from the plugin when you no longer need the integration.

Google Terms: developers.google.com/terms

Google Privacy Policy: policies.google.com/privacy

Google API Services User Data Policy: API Services User Data Policy

## 6. Privacy and data handling

| Feature | What to know |
|---|---|
| Public audit/cooldown | A short-lived site-keyed hash derived from requester IP is used for abuse cooldown; Activity is not intended to store raw IP. |
| Audit Activity | Optional; stores normalized domain and timestamp, deduplicates domain/day, prunes old records, and applies a record cap. |
| Google Search Console | When configured, OAuth credentials/tokens are stored in the WordPress database; secure your site and database. |
| External links | PageSpeed Insights and Schema Markup Validator links open in the browser when clicked. |
| Audit requests | The destination site receives ordinary HTTP requests from your WordPress server. |

## 7. Troubleshooting and support

| Problem | What to check |
|---|---|
| Shortcode appears as text | Use a Shortcode block; confirm the plugin is active. |
| Audit does not submit | Check URL scheme, required acknowledgement, browser console and PHP logs. |
| Fewer pages or timeout | Crawl is bounded by page and time limits; investigate slow/blocking responses. |
| Google connection fails | Verify OAuth credentials, redirect URI, property access and logs. |
| CSV link fails | Generate a fresh export; temporary tokens expire and are single-use. |
| Admin menu missing | Confirm activation and administrator permissions. |
